

Global Surgical, Obstetric and Anaesthesia Care

Technical Meeting
WHO Emergency and Essential Surgical Care Programme

71st World Health Assembly, World Health Organization

Scaling up universal health coverage with surgical, obstetric and anaesthesia care as part of strengthening health systems and sustainable development

OBJECTIVE: To strengthen ownership, leadership, collaboration and partnership by building institutional bridges, sharing best practices and experiences between representatives from countries, professional associations, academia, civil society and private sector.

CONTENT: Following the successful programme of presentations at the surgical side event during last year's WHA, we will be facilitating a variety of engaging talks and discussions from international experts in global surgery, obstetrics and anaesthesia (SOA). The primary themes of this side event will be focusing on the development of national SOA plans as part of national health strategic plans, financing of national surgical care delivery platforms, information management and using data to drive health policy, and current and future global SOA workforce needs.

VENUE – World Council of Churches | 150 Route de Ferney
